

UNITED CARE TEAMS

COMMUNICATION SIMPLIFIED

With Pulsara, alert the emergency department with just a tap – for every case (from STEMI or sepsis to trauma or pandemics) – every time.

Instantly and seamlessly communicate event-based patient information, including one-tap team notifications, image sharing, audio/video calls, ETA alerts, and more. Quickly start a case, share important details (like the ECG or images from the field) and receive instant feedback as soon as the case is closed.

The best part? Using Pulsara reduces treatment times by an average of 30%.
