pulsara

# IT'S ABOUT PEOPLE

Pulsara is a regional communication network that connects EMS, hospitals and healthcare providers, improving outcomes in time sensitive transports.
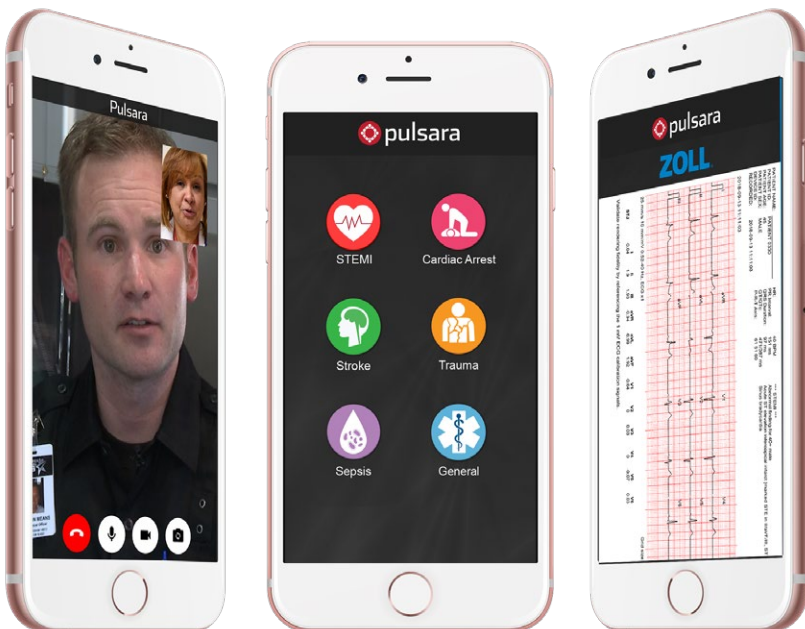

EMS

Connecting Teams

Treating patients during a time sensitive emergency like STEMI, stroke, trauma, SCA, and sepsis, demands a team approach on a shared patient channel that can be updated in real time. Traditional radio, pager, and fax machine communication systems were never designed for real time team collaboration.

Does your communication system share patient information seamlessly with ALL team members both in and outside of the hospital?

IT'S ABOUT TIME

Most EMS to Hospital communication systems have not kept pace with today's technology. Radio reports are limited and restrict critical information and transmission of the patient's identification—blocking the ability to pre-register and retrieve prior medical records. Dedicated emergency teams rely on EMS for prompt activation and specific patient information. The need for connectivity between these teams has never been greater.

How Pulsara Helps

Pulsara connects teams regardless of their location and organization. EMS communicates directly with the emergency department. The emergency department can dynamically include specialists and departments, instantaneously making information available across all teams. This real-time connectivity:
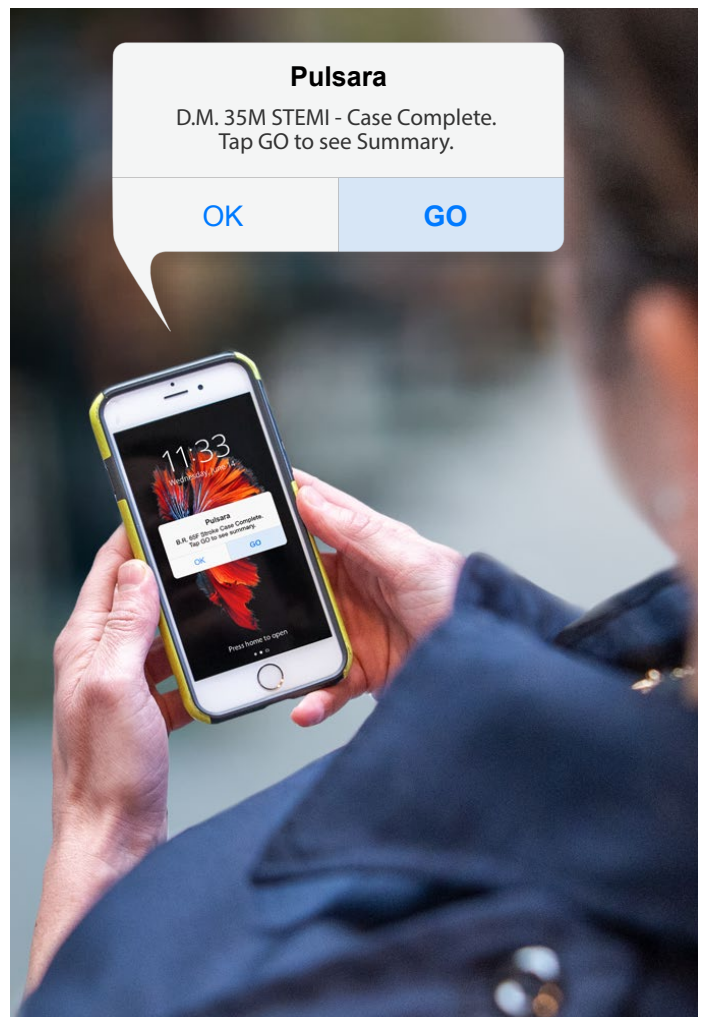

- Shortens treatment times
- Improves care team coordination
- Reduces costs

Ultimately, these three things mean better patient care.

What is Pulsara?

Pulsara is an integrated digital care communication platform, streamlining the coordination of patient information, images, videos, ECGs and more. With a simple tap, you'll have the ability to:

- Replace the radio report.

- Eliminate delays caused by heavy radio traffic.

- Auto calculate ETA.

- Communicate on a HIPAA-compliant, secure, cloud-based platform.

- Capture and share any pertinent patient information.

- Enjoy transparent team activation, collaboration, and file sharing.

- See all crucial events, automatically date and time stamped to one clock.

- Receive instant feedback for all members—INCLUDING EMS!

- Export data for CQI and Reporting.

PATIENT JOURNEY

IT'S ABOUT PEOPLE

THE FUTURE OF HEALTHCARE COMMUNICATION:
CONNECTED TEAMS

ANY PATIENT. ANY CONDITION. ANY PROVIDER.

No more inefficient patient reports via phone or radio. Instead, with just a few taps you're back to focusing on what really matters: **your patient.** Building a patient centric regional communication network is simple with Pulsara.

> *"The ability to connect to the right person at the right time for the right patient is a game changer. Pulsara connects EMS to the evolving healthcare world."*
